

Jefferson Electric's Transformers Meet Canadian Efficiency Standards!

Jefferson Electric manufactures a full-line of ventilated distribution and drive isolation transformers which meet Canadian Energy Efficiency standard C802.2.

To comply with Canadian testing requirements, Jefferson Electric chose Intertek, an independent testing facility.

Each Jefferson Electric ventilated distribution and drive isolation transformer goes through a rigorous process including;

- Review of Design Specs for Efficiency
- Performance tests are completed and documented
- Test data is provided to NRCAN for posting on their website
- Each item is labeled with Intertek's "verified" label shown here:

Intertek:

Known as a leading provider of safety solutions in various industries across the world. Intertek has more than 1,000 laboratories across 100 different countries around the world.
